BORN TO BE TOUGH

Two engineers set out on a quest to create a watch that would not break when it was dropped. Known as "Project Team Tough", these individuals embarked on a journey that tested their passion, their resilience and their dream. Not an official corporate project, Team Tough had to find alternative means for testing their prototypes. They decided on... the toilet? It so happens that the bathroom window was 10 meters (appx. 32.81 feet) above the ground. They figured if the watch didn't break after being flung out the bathroom window, it was a success.

If it broke, well, back to the drawing board. After nearly 2 painstaking years and more than 200 prototypes, one watch survived. For Team Tough, this was the realization of a dream and the birth of what would be known as the toughest watch in the world, G-Shock.

This relentless devotion to toughness, inside and out, lives on. With its omnidirectional shock resistance, G-Shock can take a hit from any angle. But that's not enough protection. Because even more critical is protecting the brains of a G-Shock, the precious inner workings that control its every function. For this, there's our exclusive internal shock-absorbing module that cushions key components as if they were floating in air.

Passion built the G-Shock. And passion continues to inspire its many styles. There's G-LIDE for snowboarding, skateboarding and surfing. TOUGH LABEL for making or listening to music. 21st C.B. for art, graffiti and street culture. G-COOL for staying organized and looking sharp. MASTER of G-Shock for going to extremes. They're all G-Shocks, the toughest watches in the world.
